

A CRM Application to Handle the Clients and their property Related Requirements

Use Story :

Dreams World Properties is embarking on a transformative journey by integrating Salesforce into their business operations to streamline customer interactions. With the aim of enhancing user experience and efficiency, the company seeks to automate its processes seamlessly. One of the primary objectives is to establish a seamless connection between their website and Salesforce platform.

Upon a customer expressing interest on the website, an automated system will trigger the creation of a corresponding record within the Salesforce database. This record will serve as a comprehensive profile capturing essential details about the prospective customer and their expressed preferences.

Furthermore, Through Salesforce's robust capabilities, Dreams World Properties intends to categorize users into two distinct categories: approved and non-approved. Approved users will enjoy privileged access to a curated selection of properties tailored to their preferences and requirements. On the other hand, non-approved users will still have access to a broader range of property listings but may not benefit from the personalized experience offered to approved users.

Project Overview : -

Dreams World Properties integrates Salesforce to streamline customer interactions. Website engagement triggers automated record creation in Salesforce, capturing customer details and preferences. Salesforce categorizes users as approved or non-approved, offering tailored property selections to approved users. This enhances user experience and efficiency, providing personalized recommendations and broader listings. Seamless integration optimizes operations, improving customer engagement and facilitating growth in the real estate market.

Project Flow:

Milestone 1 : Create a jotform and integrate it with the org to create records automatically
Milestone 2 : Create Objects from Spreadsheet
Milestone 3 : Integrate Jotform with Salesforce Platform
Milestone 4 : Create Roles
Milestone 5 : Create a Property Details App
Milestone 6 : Create Profiles
Milestone 7 : Create a Checkbox Field on User
Milestone 8 : Create Users
Milestone 9 : Create an Approval Process for Property Object
Milestone 10 : Create a Record trigger flow to submit the Approval Process Automatically.
Milestone 11 : Create an App Page
Milestone 11 : Create an LWC Component
Milestone 11 : Drag this Component To Your App Page

Requirements : -

1) Website Integration Requirements :

Implement a form on the website for users to express interest in property listings.
Ensure the form captures essential details such as name, contact information, preferred property type, location, budget, etc. Set up validation rules to ensure data accuracy and completeness.
Integrate the form submission process with Salesforce.

2) Salesforce Configuration Requirements :

Set up Salesforce objects and fields to store customer data. This includes fields for name, contact information, preferences, approval status, etc. Define workflows or processes to automate the creation of records when a user submits the form on the website.
Implement validation rules and data integrity checks to maintain data quality.
Configure Salesforce security settings to control access to customer records based on approval status.

3) Approval Process Requirements :

Define criteria for categorizing users as approved or non-approved based on specific parameters such as budget, property preferences, etc. Implement an approval process in Salesforce to review and approve users. Set up email notifications or alerts to notify relevant stakeholders when a user is approved or rejected. Ensure that approved users are granted access to curated property listings tailored to their preferences.

4) User Experience Requirements:

Design user interfaces in Salesforce for managing customer records, approval processes, and property listings. Ensure a seamless user experience for both customers and internal users interacting with Salesforce. Provide training and documentation for internal staff on how to use the Salesforce system effectively.

5) Integration Testing and Quality Assurance Requirements:

Conduct thorough testing of the integration between the website and Salesforce to ensure data is accurately captured and transferred. Perform end-to-end testing of the approval process to verify that users are categorized correctly and granted appropriate access. Identify and resolve any issues or bugs encountered during testing.

6) Scalability and Performance Requirements:

Ensure that the integration and Salesforce configuration are scalable to accommodate future growth in customer volume and data. Optimize system performance to ensure responsiveness and reliability, especially during peak usage periods.

7) Documentation and Maintenance Requirements:

Document the integration architecture, data flows, and configuration details for future reference. Establish procedures for ongoing maintenance and updates to the integration and Salesforce configuration. Provide ongoing support and training for users to address any issues or questions that may arise.

What you'll learn

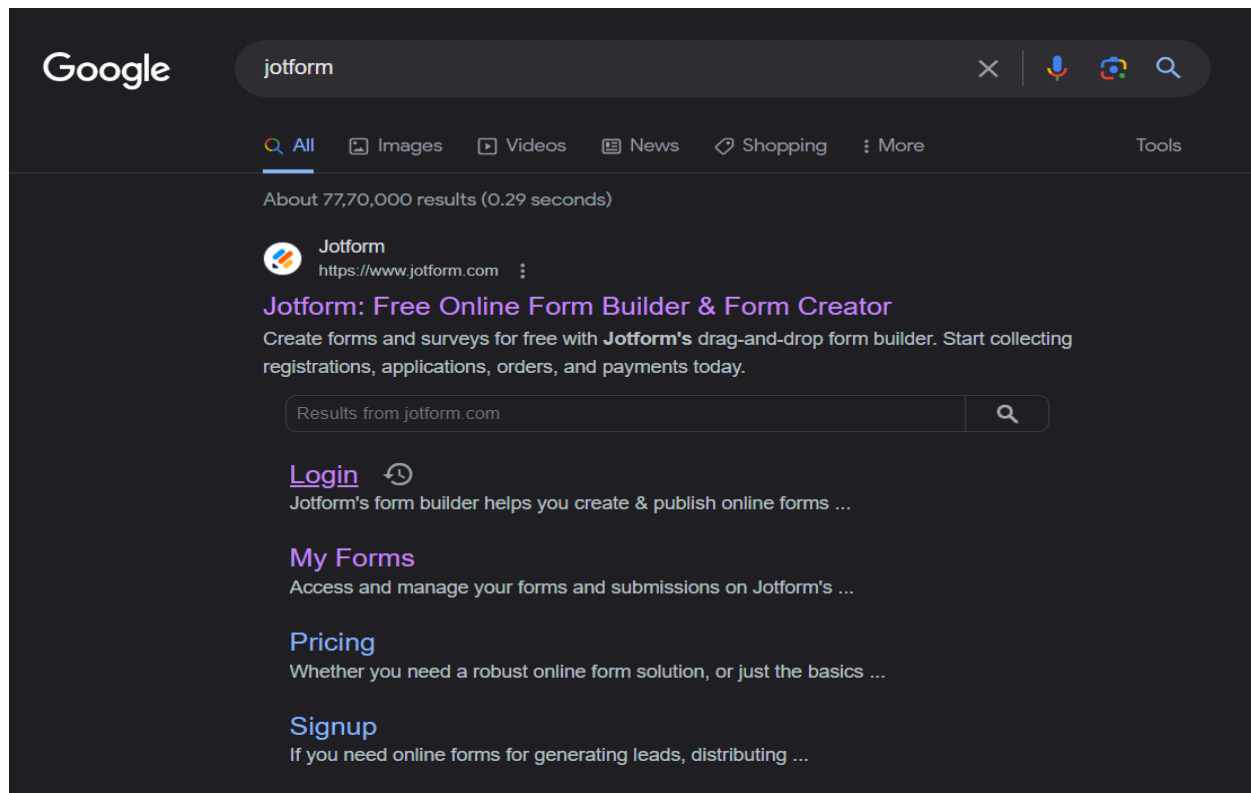

1. Real Time Salesforce Project
2. Object & Fields
3. Integration Through Jotform
4. Roles
5. Application Management
6. Profiles
7. User Management
8. Approval Process
9. Flows
10. LWC Components

After Creating the Salesforce org Start with the First Milestone

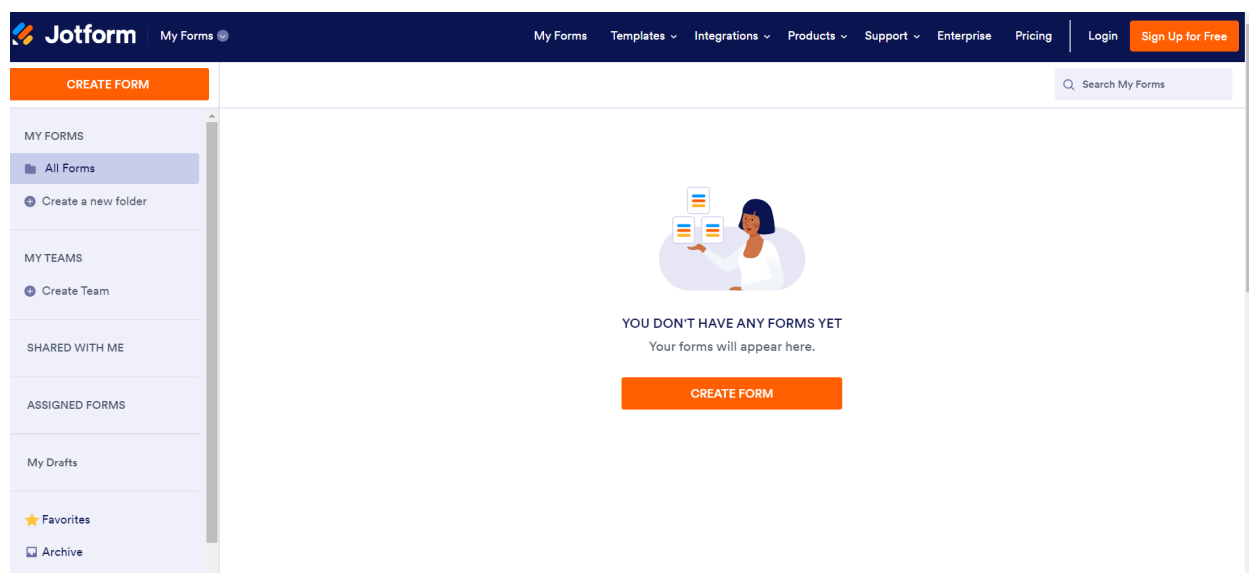

Milestone 1 :- Create a jotform and integrate it with the org to create a record of customers automatically.

USE CASE : - Client wants a form for the customers to get the details directly into the salesforce so that the admins can create a user in the org.

- 1) Open your browser and search for jotform and log in.

2) After login click on create form and click on start from scratch

- 3) Now create a form to get the customer details like Name, Phone, Email, Address and type of property the customer is interested in.

If you want to remove Jotform Branding, [please upgrade your account](#)

 Jotform

Now create your own Jotforms - It's free [Create your own Jotform](#)

- 4) Once the form is created, publish it by clicking on publish.

<https://www.jotform.com/form/240031134484041>

Milestone 2 :- Create Objects from Spreadsheet.

- **Create Customer object**

- 1) Go to your object manager and click on create object from spreadsheet
- 2) Click on the link to get the spreadsheet,
- 3) [customer](#)
- 4) After downloading, upload the file, map the fields and upload to create an object.

- **Create Property object**

- 1) Follow the same from the customer object to create the Property Object
- 2) [Property](#)

Milestone 3 : - Integrate Jotform with Salesforce Platform

]

- 1) On the Jotform Platform, Click on Integration and choose Salesforce.

2) Click on User Integration and choose “Add to From”.

3) Select the Org with which you want to Integrate your jotform with.

The screenshot shows the Jotform Form Builder interface for a form named "Dreams World". The top navigation bar includes "Jotform", "Form Builder", and "Dreams World" with a status "All changes saved at 2:43 PM". On the right, there are buttons for "Add Collaborators", "Help", and a user profile icon. Below the navigation bar are tabs for "BUILD", "SETTINGS", and "PUBLISH", with a "Preview Form" toggle on the right. The left sidebar contains a list of settings: FORM SETTINGS, EMAILS, CONDITIONS, THANK YOU PAGE, INTEGRATIONS (highlighted), APPROVAL FLOWS, JOTFORM SIGN, and MOBILE NOTIFICATIONS. The main content area is titled "Salesforce via this handy integration." and includes a list of actions: "Add new company leads", "Add new contacts", "Add new accounts", and "Connect any custom object". Below this is a section for "Authentication" with a dropdown menu labeled "Select a Salesforce account" and a list of accounts: "dada rao - prajwal@thesmartbridge.com". A "Send Feedback" button is located at the bottom right.

4) Select an Action - Create a record.
Select a Salesforce Object : - Customer

The screenshot shows the Jotform Form Builder interface for a form named "Dreams World". The top navigation bar includes "Jotform", "Form Builder", and "Dreams World" with a status "All changes saved at 2:43 PM". On the right, there are buttons for "Add Collaborators", "Help", and a user profile icon. Below the navigation bar are tabs for "BUILD", "SETTINGS", and "PUBLISH", with a "Preview Form" toggle on the right. The left sidebar contains a list of settings: FORM SETTINGS, EMAILS, CONDITIONS, THANK YOU PAGE, INTEGRATIONS (highlighted), APPROVAL FLOWS, JOTFORM SIGN, and MOBILE NOTIFICATIONS. The main content area is titled "Salesforce via this handy integration." and includes a list of actions: "Create a record" (selected) and "Find existing record". Below this is a section for "Select a Salesforce Object" with a dropdown menu labeled "Customer" and a list of objects: "Customer". Below this is a section for "Object Fields" with two dropdown menus labeled "Select field" and a button labeled "+ Add Field". At the bottom, there is a section for "Update an existing record" with a toggle switch labeled "OFF". A "Send Feedback" button is located at the bottom right.

5) Map Each and every field on the Object with the fields on the form and “Save Action”.

Create a record
Send data from form fields to matched Salesforce fields

[CANCEL](#) [SAVE INTEGRATION](#)

Milestone 4 : Create Roles

- **Sales Executive Role**

1) Go to Setup and Click on Roles, then click on Expand all and Add a Role just below the Sales Representative

The screenshot shows the Salesforce Setup interface. At the top, there's a search bar labeled "Search Setup". Below it, the navigation menu includes "Setup", "Home", and "Object Manager". The left sidebar shows a search bar with "roles" entered and a list of categories: Users, Roles (highlighted), Feature Settings, Sales, Service, and Case Teams. The main content area is titled "Roles" and displays a hierarchical list of roles. The roles are organized into a tree structure with expand/collapse icons. The roles listed are: Customer Support, International; Customer Support, North America; Installation & Repair Services; SVP, Human Resources; SVP, Sales & Marketing; VP, International Sales; VP, Marketing; Marketing Team; VP, North American Sales; Director, Channel Sales; Channel Sales Team; Director, Direct Sales; Eastern Sales Team; Western Sales Team; and Sales Representative. Each role has links for "Edit", "Del", and "Assign". Below the "Sales Representative" role, there is an "Add Role" link.

* It will use the “System Administrator Profile”.

- 2) Label - Sales Executive
Reports to - Sales Representative

SETUP

Org Theme Options
☐ Use the app's image and color instead of the org's custom theme

App Launcher Preview

Next

- 2) Click Next → Next → Save and Add “System Admin ”Profile.

Milestone 6 : - Create Profiles

- **Customer : -**

- 1) From Setup → Go to Profiles and Clone Salesforce Platform User and Name it “Customer”..

2) Uncheck all the Custom Objects and Check only Property Details From Custom App Settings.

3) Also Remove all the Standard Object Permissions.

Standard Object Permissions

The permissions defined here control access at the object level. Access to individual records within that object type is controlled by the sharing model. Set access levels based on the functional requirements for the profile. For example, create different groups of permissions for individual contributors, managers, and administrators. [How do I choose?](#)

[illegible]

- 4) Uncheck all the Custom Object Permissions and check read and view all in “Property”

[illegible]

- **Manager : -**

- 1) From Setup→ Go to Profiles and Clone Salesforce Platform User and Name it “Manager”..
- 2) Uncheck all the Custom Objects and Check only Property Details From Custom App Settings.

SETUP
Profiles

Set the permissions and page layouts for this profile.

Milestone 8 : - Create Users

Create three different users with three different Roles and profiles as we have mentioned above.

User 1 : -

- 1) Go to Setup → Administration → Users → New User
- 2) LastName - Executive
- 3) Role - Sales Executive
- 4) License - Salesforce
- 5) Profile - System Administrator
- 6) Save

User 2 : -

- 1) Go to Setup → Administration → Users → New User
- 2) LastName - Manager
- 3) Role - Sales Manager
- 4) License - Salesforce Platform
- 5) Profile - Manager
- 6) Save

User 3 : -

- 1) Go to Setup → Administration → Users → New User

- 2) LastName - Customer
- 3) Role - Customer
- 4) License - Salesforce Platform
- 5) Profile - Customer
- 6) Make Sure the verified check box is “Unchecked”
- 7) Save

User 4 : -

- 1) Go to Setup → Administration → Users → New User
- 2) LastName - Customer2
- 3) Role - Customer
- 4) License - Salesforce Platform
- 5) Profile - Customer
- 6) Make Sure the verified check box is “checked”
- 7) Save

Milestone 9 :- Create an Approval Process for Property Object

- 1) From Setup → Process Automation → Approval Process

2) Process Name - Property Approval

Approval Processes

Approval Process Edit
Property Approval

Step 1 of 6

Enter a name and description for your new approval process.

Enter Name and Description

Process Name: Property Approval

Unique Name: Property_Approval

Description:

Save Next Cancel

3) Give 2 criteria →

- a) Location is not equal to blank,
- b) Verified Equals false.

Approval Processes

Approval Process Edit
Property Approval

Step 2 of 6

If only certain types of records should enter this approval process, enter that criteria below. For example, only expense reports from employees at headquarters should use this approval process.

Specify Entry Criteria

Use this approval process if the following criteria are met:

Field	Operator	Value	
Property: Location	not equal to	blank	AND
Property: Verified	equals	False	AND
--None--	--None--		AND
--None--	--None--		AND
--None--	--None--		

Add Filter Logic...

Previous Save Next Cancel

4) Click next and “Next Automated Approver Determined By” → Select Manager

5) From Record Editability Properties → Click on Administrators **OR** the currently assigned approver can edit records during the approval process.

Approval Processes

Approval Process Edit
Property Approval

Step 3. Specify Approver Field and Record Editability Properties

When you define approval steps, you can assign approval requests to different users. One of your options is to use a user field to automatically route these requests. If you want to use this option for any of your approval steps, select a field from the picklist below. Also, when a record is in the approval process, it will always be locked-- only an administrator will be able to edit it. However, you may choose to also allow the currently assigned approver to edit the record.

Select Field Used for Automated Approval Routing

Next Automated Approver Determined By: Manager

Use Approver Field of Property Owner: ☐

Record Editability Properties

☐ Administrators ONLY can edit records during the approval process.

☒ Administrators OR the currently assigned approver can edit records during the approval process.

6) From Step 5. Select Fields to Display on Approval Page Layout select Property, Owner, Location, Type.

Approval Processes

Property Approval

Step 5. Select Fields to Display on Approval Page Layout

The approval page is where an approver will actually approve or reject a request. Using the options below, choose the fields to display on this page.

Available Fields

- Created By
- Last Modified By
- Property link
- Verified

Selected Fields

- Property
- Owner
- Location
- Property Name
- Type

[Click here to view an example](#)

7) Click Next and Select the initial Submitters →

a) Owner → Property Owner

b) Roles → Sales Manager

8) Save.

9) Add an approval step name “Executive Approval ”

Approval Step Edit
VP Approval [Help for this Page](#)

Step 1. Enter Name and Description Step 1 of 3

Save Next Cancel

Enter a name, description, and step number for your new approval step.

Enter Name and Description = Required information

Approval Process Name	Property Approval

7) Then Click on “Save”

Milestone 12 :- Create a LWC Component

- Create an Lwc Component for the customers so that only verified customers can access the verified properties and non Verified customers can access non verified properties, and deploy it on “Search your Property Page”

1) Create an Apex Class and make it aura enabled and name it “PropertHandler_LWC”

Code: -

```
public class PropertHandler_LWC{  
    @AuraEnabled(cacheable=true)  
    public static list<Property__c> getProperty(string type , boolean verified){  
        return [SELECT Id, Location__c, Property_Name__c, Type__c, Verified__c FROM  
Property__c Where Type__c =: type AND Verified__c =: verified];  
    }  
}
```

2) Create a Lightning Web Component in your VsCode, and (ctrl+shift +P) and click on authorize an org.

- 3) Enter your login id and password to authorize your org.
- 4) Now (ctrl+shift +P) → Create a lightning Web Component and Name it Anything you want to. (Example -)
- 5) In your Html File Write this code : -

Code :-

```

<template>
  <lightning-card>
    <div class="slds-box">
      <div class="slds-text-align_left">
        <h1 style="font-size: 20px;"><b>Properties</b></h1>
      </div>
      <div>
        <div class="slds-grid slds-gutters">
          <div class="slds-col slds-size_5-of-6">
            <lightning-combobox name="Type" label="Property Type" value={typevar}
placeholder="Select Property type"
options={propetyoptions} onchange={changehandler}></lightning-combobox>
          </div>
          <div class="slds-col slds-size_1-of-6">
            <br>
            <lightning-button-icon variant="neutral" icon-name="standard:search"
alternative-text="Search"
label="Search" onclick={handleClick}></lightning-button-icon>
          </div>
        </div>
      </div>
    </div>

    <template if:true={istru}>
      <div class="slds-box">
        <lightning-datatable key-field="id" data={propertylist}
columns={columns}></lightning-datatable>
      </div>
    </template>
    <template if:false={isfalse}>

```

```

        <div class="slds-box">
            <div style="font-size: 15px;"><b>No properties Are Found !!</b></div>
        </div>
    </template>

</lightning-card>
</template>

```

```

1  <template>
2  <lightning-card>
3      <div class="slds-box">
4          <div class="slds-text-align_left">

```

6) In Your Js File Write this code :-

Code :-

```

import { LightningElement, api, track, wire } from 'lwc';
import getProperty from "@salesforce/apex/PropertHandler_LWC.getProperty";
import { getRecord } from 'lightning/uiRecordApi';
import USER_ID from '@salesforce/user/Id';
export default class C_01_Property_Management extends LightningElement {
    @api recordId
    userId = USER_ID;

```

```

verifiedvar
typevar
isfalse = true;
istrue = false;
@track propertylist = [];
columns = [
    { label: 'Property Name', fieldName: 'Property_Name__c' },
    { label: 'Property Type', fieldName: 'Type__c' },
    { label: 'Property Location', fieldName: 'Location__c' },
    { label: "Property link", fieldName: "Property_link__c" }
]
propetyoptions = [
    { label: "Commercial", value: "Commercial" },
    { label: "Residential", value: "Residential" },
    { label: "rental", value: "rental" }

]
@wire(getRecord, { recordId: "$userId", fields: ['User.Verified__c'] })
recordFunction({ data, error }) {
    if (data) {
        console.log(data)
        console.log("This is the User Id ---> "+this.userId);
        this.verifiedvar = data.fields.Verified__c.value;
    } else {
        console.error(error)
        console.log('this is error')
    }
}

changehandler(event) {
    console.log(event.target.value);
    this.typevar = event.target.value;
}
handleClick() {

    getProperty({ type: this.typevar, verified: this.verifiedvar })
        .then((result) => {
            this.isfalse = true;
            console.log(result)
            console.log('This is the User id ---> ' + this.userId);
        })
}

```

```
    console.log('This is the verified values ---> ' + this.verifiedvar);  
    if (result != null && result.length != 0) {  
        this.istrue = true;  
        this.propertylist = result;  
        console.log(this.verifiedvar);  
        console.log(this.typevar)  
    } else {  
        this.isfalse = false;  
        this.istrue = false;  
    }  
  
    })  
    .catch((error) => {  
        console.log(error)  
    })  
    }  
  
}
```

```

62    }
63 }
64
65
66 }

```

7) In Your metafile give your targets to deploy the component.

Code :-

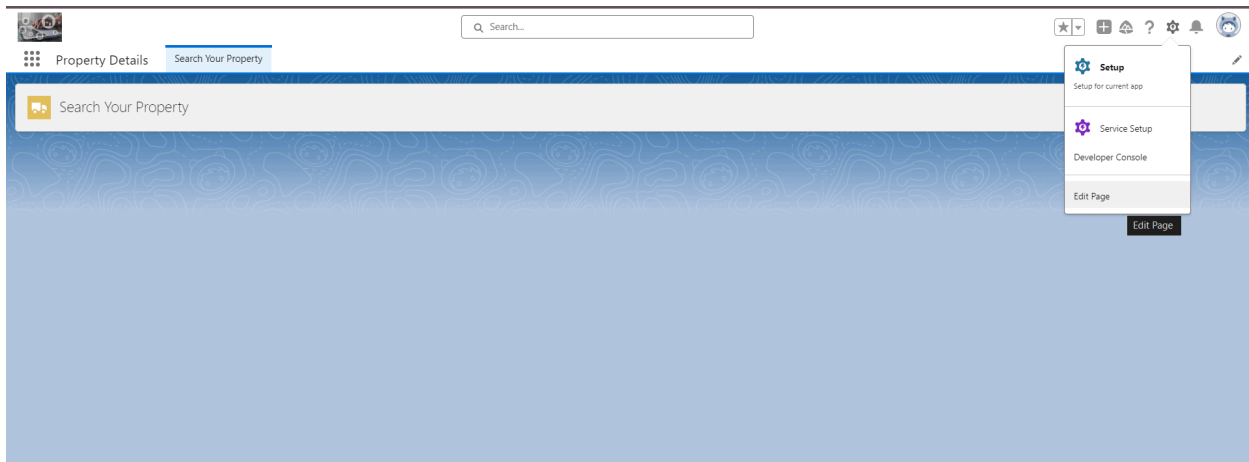

```
<?xml version="1.0" encoding="UTF-8"?>
<LightningComponentBundle xmlns="http://soap.sforce.com/2006/04/metadata">
  <apiVersion>59.0</apiVersion>
  <isExposed>true</isExposed>
  <targets>
    <target>lightning__RecordPage</target>
    <target>lightning__AppPage</target>
    <target>lightning__HomePage</target>
  </targets>
</LightningComponentBundle>
```

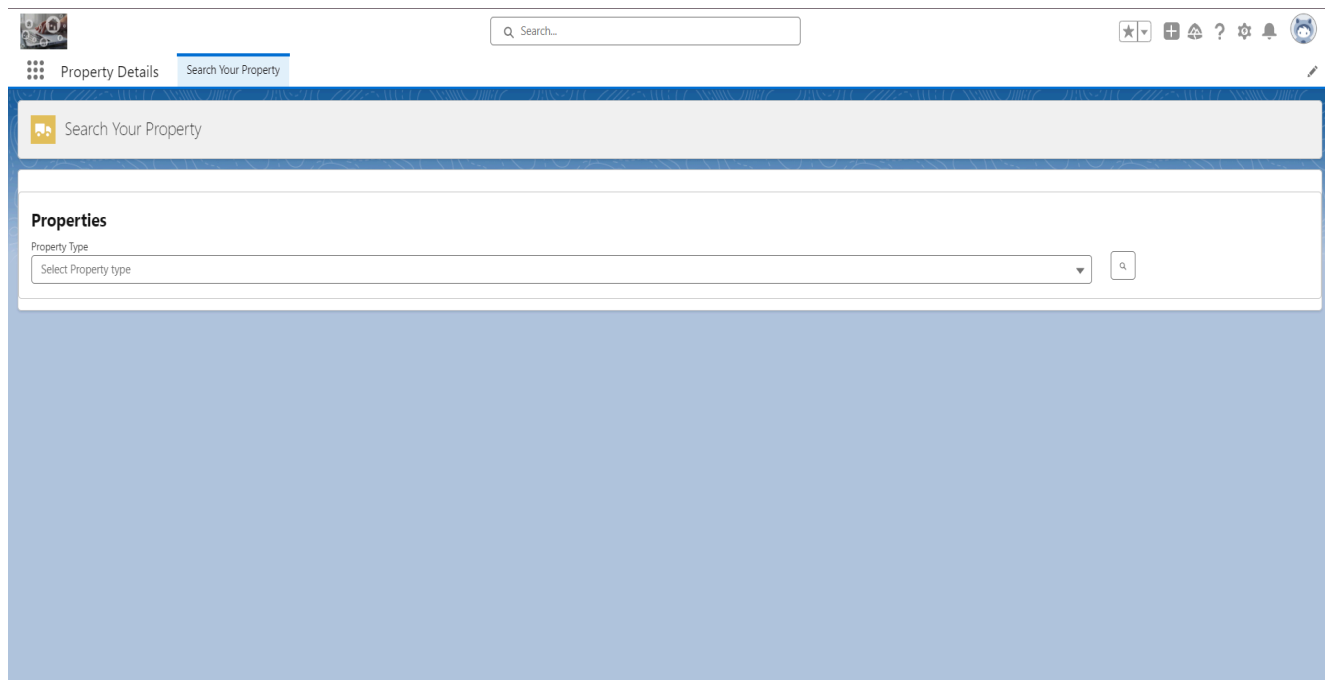

8) After Saving all the three Codes , Right Click and deploy this component to the org.

Milestone 13 : - Drag this Component to your App Page

- 1) From Setup → Go to App Launcher → Search for Property Details
- 2) On this Page click on gear icon and click on Edit Page

- 3) Drag theComponent to your App Page and Save the Page.

Milestone 14 : - Give Access of Apex Classes to Profiles

- 1) From Setup → Search For Apex Classes → Click on “Security” behind “PropertyHandler__LWC”.
- 2) From Profiles Add “Manager” and “Customer” and “Save”.
